

WAGO press release | CODESYS Community booth SPS 2023

OPEN. To the code of your choice.

WAGO offers the right controller for every task and requirement.

With WAGO's controllers, you'll be completely independent of your automation because they support all standard fieldbus protocols, Embedded Linux as an operating system and the CODESYS development environment per IEC 6113-3.

This allows you to use your existing protocols, easily switch to new protocols, and configure your engineering to be as flexible as your application.

The Linux-based ctrlX OS operating system, which is available for the WAGO Edge Computer, provides even more flexibility. You have the freedom to choose the programming environment and can tailor control tasks to your needs.

We're making it easy for you to visit us at the SPS trade show in Nuremberg by having two locations: We'll be at the CODESYS joint booth and also in Hall 7 (Booth 130/230/330), where you can discover our wide range of products and solutions.

We look forward to seeing you there!

Your WAGO Team
